Week Ten Status
12/9/2022
TEAM RAD
Real-time Anomaly Detection

Goals:
- Deploy Pytorch and deploy inference file on SageMaker

SageMaker:
- Still constructing inference files so that models can be used for inference from the BETH dataset.
    - Created partial inference file that can load torch models and give results.
- File conversion from pth to joblib is found to be no longer necessary.
- Trying to find examples of inference scripts to base ours on.
- Inference script should be the last step for getting the model on Sagemalker.
